

Major Work Stoppages

Technical Note

Major work stoppages are those involving 1,000 workers or more and lasting a full shift or longer, and include worker-initiated strikes, as well as lockouts by employers. A strike is defined as a temporary stoppage of work by a group of workers (not necessarily members of a union) to express a grievance or enforce a demand. A lockout is a temporary withholding or denial of employment during a labor dispute to enforce terms of employment upon a group of employees. Because of the complexity of disputes, the Bureau does not attempt to distinguish between strikes and lockouts in its statistics; both are included in the term "work stoppages."

Data for the number of workers involved and days idle include all workers made idle for one shift or longer in establishments directly involved in a stoppage. They do not account for secondary idleness as a result of material or service shortages. The number of workers idled in any stoppage represents the maximum number of workers idled during the reference period for that stoppage.

In the monthly tables, days idle during the reference period for any one stoppage is calculated by adding the number of days lost by each affected worker during the month from the beginning date through the ending date of the stoppage. In addition, days idle is shown as a total for all stoppages in effect during the month.

In the historical table, cumulative figures for days idle for the year or year-to-date are shown for various refer-

ence periods. In addition, days idle is shown as a percent of estimated working time for all stoppages that occurred during the reference period. Total days idle is the sum of the days idle for all stoppages in effect during the reference period. Estimated working time is computed by multiplying total employment during the reference period by the number of days typically worked by most employees during that period. (Total employment excludes private households, forestry, and fishery employees, and is taken from *Employment and Earnings* published by the Office of Employment and Unemployment Statistics.) The percent of estimated working time lost is calculated by dividing the total days idle for all stoppages occurring during the reference period by the estimated working time for all employees in the economy during that period.
